INTEGRATION OF THE FIRST SERIES-PRODUCED E-VEHICLE INTO THE AUDI PAINT SHOP IN BRUSSELS

In September 2018, the first e-tron from Audi rolled off the assembly line in Brussels – in catalunya red. Participants in the conference „Car Body Painting Insight @ Audi 2019“ will be able to see which colours are currently the most popular during an exclusive tour of the former Audi A1 plant.

In order to get closer to the goal of electrifying one-third of its vehicles delivered by 2025, the plant has been extensively rebuilt step by step since summer 2016. This also applies to the paint shop, where, for example, conversions were carried out on the paint drying ovens.

The production of the electric car in Brussels is the world's first certified CO₂-neutral mass production in the premium segment. Audi offsets all emissions generated during production and at the site. This is done primarily through renewable energy, but also through various environmental projects.

Experience the Audi paint shop in Brussels!

We look forward to your participation!
